

WEB DESIGN
PowerStandards

The students will:

1. Explain what web design is and its uses.
2. Identify and critique features and characteristics of various websites that make them appealing and user-friendly.
3. Understand the basics of HTML code.
4. Create, edit, and maintain their websites on the class website using Weebly.
5. Create their webs' navigation system and hyperlinks.
6. Use a photo-editing program to edit and maintain images in their website.
7. Write and edit different types of articles and publish them on their website.
8. Import graphics, text, documents, charts, and interactive pages from other programs into their websites.
